

ABSTRACT

A method and device for securing a tee shirt to a bra. The device is an elongated fabric strip with a first fastener on one end and a second fastener on the other end. The fasteners are preferably of the hook and loop type. They are positioned so that when the elongated fabric strip is curled into a loop, the first and second fasteners can be attached to maintain the fabric strip in the loop. The method for applying the device is as follows, with reference to FIGs. 4, 5, and 6: The lower portion of the tee shirt is passed under the center web of the bra, then back out through the neck opening. The lower portion is thereby looped around the bra, as shown in FIG. 5. The present device is then looped around the looped portion of the tee shirt. The hook and loop fasteners are pressed together to secure the tee wrap in the position shown in FIG. 6. In that state it securely attaches the tee shirt to the bra.
